

PV Compact

DN50-DN200

Description

The PV Compact is a dynamic, adjustable differential pressure control valve (DPCV) that ensures the differential pressure across the load or circuit is constant.

PV Compact is offered in 2 series:

- The Ultra series has reduced size and weight to offer an easy installation.
- The Standard series has higher Kvs values to offer the lowest possible pressure loss.

Application

The PV Compact should be installed in the return pipe and can be used in both heating and cooling systems.

Operation

The PV Compact helps to deliver stable system conditions that provide improved control valve authority for modulating control valves whilst reducing the risk of noise.

Benefits

- Compact design for ease of installation
- Delivers stable system conditions for improved control valve authority
- Differential pressure can be set and adjusted on site
- Reduces the risk of noise
- Wide range of housings for easy installation
- Integrated P/T Plugs for an efficient commissioning and trouble shooting
- Wide selection of differential pressure ranges
- Can be used as a flow limiter when combined with a partner valve
- Makes the systems flexible - all the circuits can operate independently

Features

- Maximum differential pressure: 1000 kPa
 - (DN50 with 2 P/T Plugs: 450 kPa)
- Pressure class PN16 or PN25
- Size range DN50 - DN200
- High flow rates up to 261 m³/h
- Flange connections ISO 7005-2 / EN 1092-2
- Control ranges:
 - DN50:
 - 20 - 80 kPa
 - 20 - 100 kPa
 - 50 - 200 kPa
 - 150 - 500 kPa
 - DN65-DN100:
 - 20 - 100 kPa
 - 50 - 200 kPa
 - 150 - 500 kPa
 - DN125-DN200:
 - 20 - 100 kPa
 - 90 - 350 kPa

PV Compact

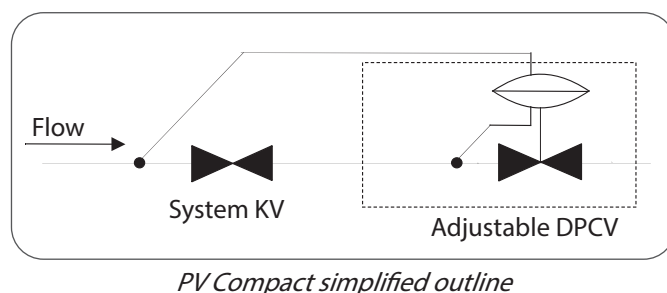

DN50-DN200

Design

PV Compact consists of a differential pressure regulation unit, an adjustable presetting and a capillary tube for connecting to the inlet pipe line.

PV Compact must be installed in the return line with the capillary tube connected to the inlet line.

Simplified Outline

Design DN50-DN200 with 3 P/T Plugs & DN50 with 2 P/T Plugs

The valve DN50 is produced with 3 or with 2 P/T plugs.

The valve DN50 with 2 P/T Plugs is lighter and more compact. To set the differential pressure on this valve a 4 mm hexagonal key is used. The key must be inserted in the setting screw and rotated the number of turns which can be specified based on the graph.

The setting of the valves with 3 P/T Plugs in sizes DN50-200 is done using a wrench and a differential pressure manometer.

*PV Compact DN50-DN200 with 3 P/T Plugs

PV Compact

DN50-DN200

Setting PV Compact DN50-DN200 with 3 P/T Plugs

- The valve is set by removing the plastic cap over the spring.
- Loosen the upper nut and set the ΔP by turning the lower nut to the required ΔP .
- After setting the valve, the upper nut must be locked against the lower nut, to stop them from turning.
- Replace the plastic cap over the spring.

PV Compact must be installed in the return line with the capillary tube connected to the inlet line. In this case, the purpose of PV Compact is to limit the differential pressure across the supply and the return line.

The differential pressure is measured by a manometer, and PV Compact is adjusted according to the description above, until the required differential pressure is reached.

Example:

- Pump pressure (ΔP_p) = Differential pressure in system (ΔP_s) + Pressure loss across valve (ΔP_v)
- Desired differential pressure in system = 30 kPa
- Flow in system = 10 m³/h
- Valve DN50 (Kv=29.0 m³/h)
- Pump pressure (ΔP_p) = 30 + ((10/29)² * 100) = 30 kPa + 11.9 kPa = 41.9 kPa

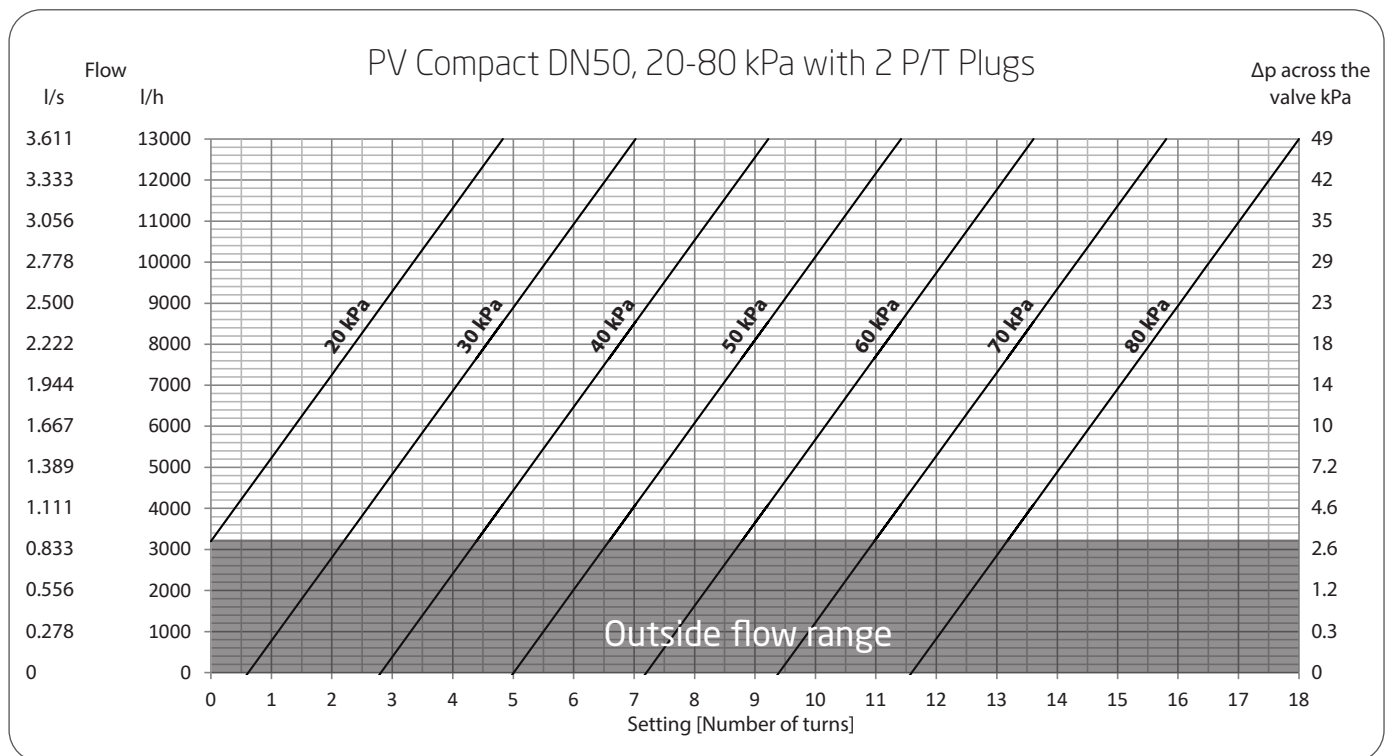

PV Compact

DN50-DN200

Setting PV Compact DN50 with 2 P/T Plugs

- The valve is easily set by means of a 4 mm hexagonal key.
- By use of the required flow rate and differential pressure, the pre-setting of the valve can easily be determined via the pre-setting graph.
- To set the valve to the desired differential pressure, the valve should be set at the minimum position and then adjusted in accordance with the presetting graph below.

Higher Δp
Lower Δp

Technical data

Valve housing/Top cover:	GJL-250 or GJS-400
Top cover:	
(DN50 with 2 P/T Plugs):	DZR Brass CWN602
DP controller:	Stainless steel
(DN50 with 2 P/T Plugs):	PPS 40% glass
Spring:	Spring wire (surface treated)
Spindle assembly:	Stainless steel
Diaphragm:	Reinforced EPDM
(DN50 with 2 P/T Plugs):	HNBR
O-rings:	EPDM
Plastic cap over spring:	PA6.6
(DN50 with 2 P/T Plugs):	ABS
Pressure class:	PN16/PN25
Flange connections:	ISO 7005-2/EN 1092-2
Max. differential pressure:	1000 kPa
(DN50 with 2 P/T Plugs):	450 kPa
Medium temperature:	DN50-DN200 PN16: -10°C to 120°C
	DN50-DN125 PN25: -10°C to 120°C
	DN150-DN200 PN25: -10°C to 110°C
Capillary tube:	ø6mm, L = 2000mm
(DN50 with 2 P/T Plugs):	ø3mm, L = 1000mm

The pipe system shall be properly ventilated to avoid risk of air pockets. Glycolic mixtures up to 50% are applicable (both ethylene and propylene).

Recommendation: Water treatment to VDI 2035.

Text for technical specifications

The valve should be a dynamic differential pressure control valve with the option of setting the differential pressure on site without suspension of operation.

The valve shall have a control range of 20-80 kPa, 20-100 kPa, 50-200 kPa or 150-500 kPa (DN50-DN100) and a control range of 20-100 kPa or 90-350 kPa (DN125-DN200)

The valve shall operate with a differential pressure up to 450 kPa or 1000 kPa.

The valve should be pressure rated PN16 or PN25.

The valve housing shall be GJL-250 or GJS-400.

The valve shall contain a differential pressure control bonnet assembly.

The valve shall have flange connections according to ISO 7005-2/EN 1092-2

The valve should be permanently marked with an indicator for flow direction.

P/T plugs shall be available.
